

HOW LONG CAN YOU WORK ON MAKING A ROUTINE TASK MORE EFFICIENT BEFORE YOU'RE SPENDING MORE TIME THAN YOU SAVE?  
(ACROSS FIVE YEARS)

		HOW OFTEN YOU DO THE TASK					
		50/DAY	5/DAY	DAILY	WEEKLY	MONTHLY	YEARLY
HOW MUCH TIME YOU SHAVE OFF	1 SECOND	1 DAY	2 HOURS	30 MINUTES	4 MINUTES	1 MINUTE	5 SECONDS
	5 SECONDS	5 DAYS	12 HOURS	2 HOURS	21 MINUTES	5 MINUTES	25 SECONDS
	30 SECONDS	4 WEEKS	3 DAYS	12 HOURS	2 HOURS	30 MINUTES	2 MINUTES
	1 MINUTE	8 WEEKS	6 DAYS	1 DAY	4 HOURS	1 HOUR	5 MINUTES
	5 MINUTES	9 MONTHS	4 WEEKS	6 DAYS	21 HOURS	5 HOURS	25 MINUTES
	30 MINUTES		6 MONTHS	5 WEEKS	5 DAYS	1 DAY	2 HOURS
	1 HOUR		10 MONTHS	2 MONTHS	10 DAYS	2 DAYS	5 HOURS
	6 HOURS				2 MONTHS	2 WEEKS	1 DAY
	1 DAY					8 WEEKS	5 DAYS

THIS IS GIT. IT TRACKS COLLABORATIVE WORK ON PROJECTS THROUGH A BEAUTIFUL DISTRIBUTED GRAPH THEORY TREE MODEL.

COOL. HOW DO WE USE IT?

NO IDEA. JUST MEMORIZE THESE SHELL COMMANDS AND TYPE THEM TO SYNC UP. IF YOU GET ERRORS, SAVE YOUR WORK ELSEWHERE, DELETE THE PROJECT, AND DOWNLOAD A FRESH COPY.

# An introduction to git

Benedikt Daurer

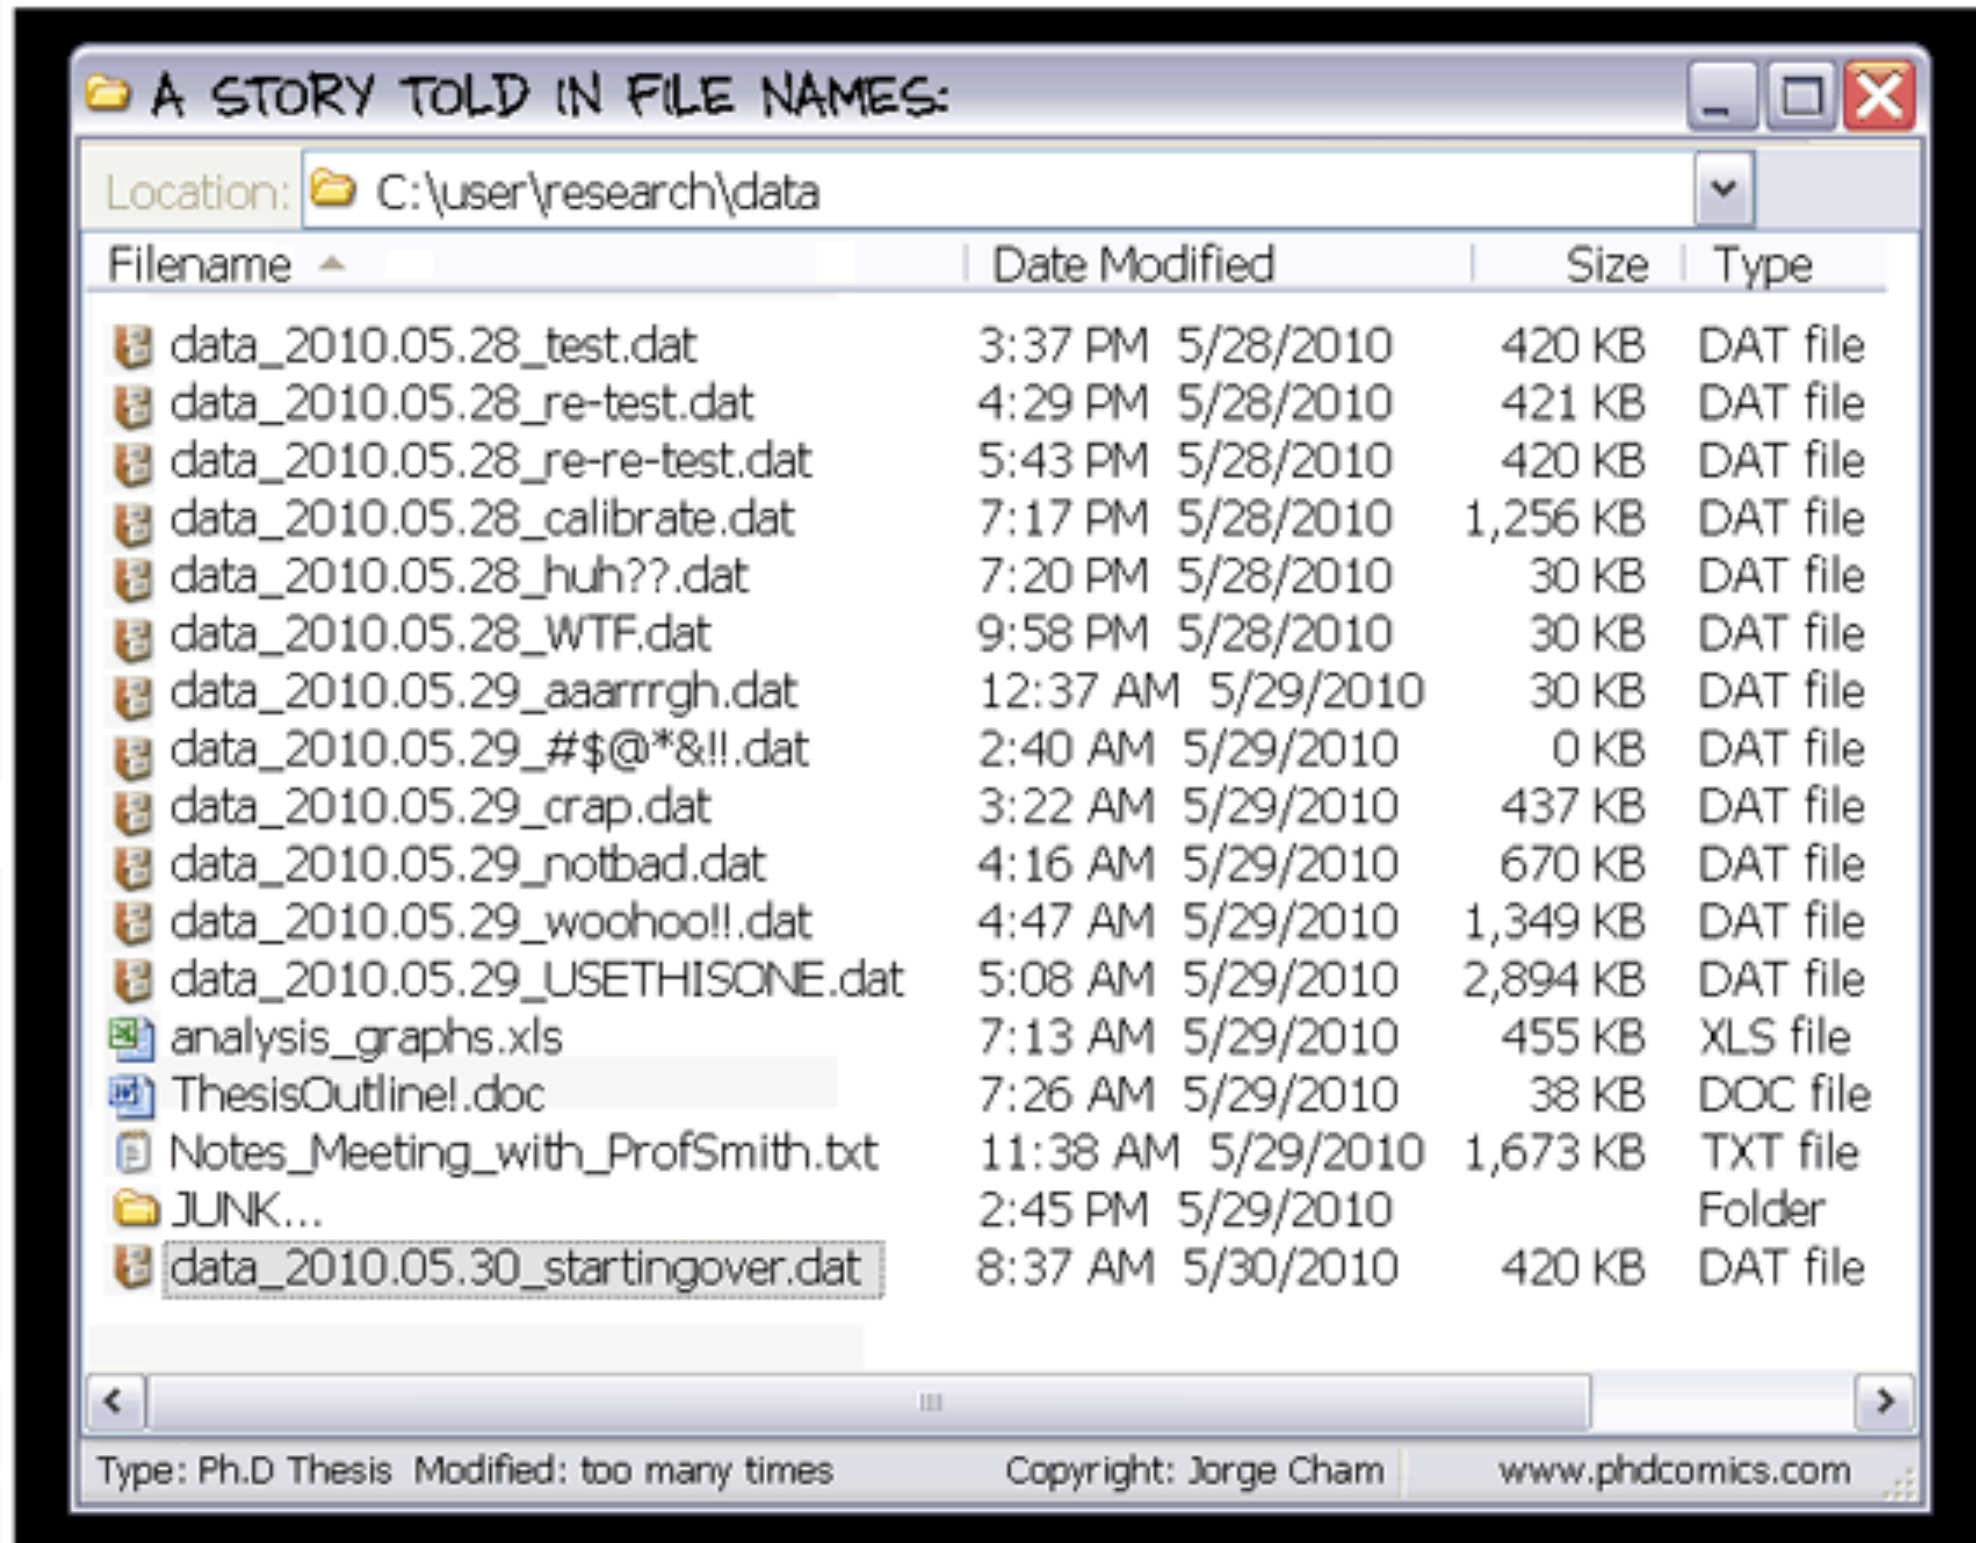

# Overview

- When should I use git and why?
- The basic concept behind version control
- How does it work in practice
- Basic git commands
- Hands-on: Getting familiar with the basics
- More advanced concepts
- Hands-on: Contribute to a collaborative project
- Summary, take-home messages

# Why do I need version control?

by Jorge Cham  
[www.phdcomics.com](http://www.phdcomics.com)

# Why do I need version control?

- Your files are better organized
- You keep a history of all previous versions
- Your research is faster, more efficient and more reproducible
- Version control benefits collaborative work
- You always have a backup

# How do I use git?

(REMOTE)

PULL/PUSH

**Collaborator A**  
(LOCAL)

**Collaborator B**  
(LOCAL)

## Creating a new project

```
$ git init
```

## Cloning an existing project

```
$ git clone https://github.com/.../project.git
```

## Adding new files to be committed

```
$ git add README.md
```

## Commit all new files

```
$ git commit -m "Useful message"
```

## Updating the local copy ("PULLING")

```
$ git pull
```

## Updating the remote ("PUSHING")

```
$ git push
```

## Current status of all files of repository

```
$ git status
```

## Show the history (commit log)

```
$ git log
```

# The lifecycle of the status of your files

Pro Git Boot, by Scott Chacon: <http://git-scm.com/book>

# Setting up git

## Local configurations (only the current repository is affected)

```
$ git config [options]
```

## Global configurations (only the user's configuration is modified)

```
$ git config --global [options]
```

## System configurations (all users are affected)

```
$ git config --system [options]
```

## Change your identity

```
$ git config --global user.name "Benedikt J. Daurer"
```

```
$ git config --global user.email "benedikt.daurer@icm.uu.se"
```

## Set your favourite editor (e.g. emacs or vim)

```
$ git config --global core.editor emacs
```

## Check your current settings

```
$ git config --list
```

# **Demonstration: The basic git commands**

# Exercise 1: Getting familiar with basic commands

- 1. Create a local copy (clone) of the following project:  
<https://github.com/uu-python/participants>
- 2. Create a new file YOURNAME.md
- 3. Write something about yourself and add your file to the files tracked by git
- 4. Commit your changes and give a meaningful log message
- 5. Update your local repository by pulling from the remote
- 6. Update the remote repository by pushing your local changes

## **Creating a new project**

```
$ git init
```

## **Cloning an existing project**

```
$ git clone https://github.com/.../project.git
```

## **Adding new files to be committed**

```
$ git add README.md
```

## **Commit all new files**

```
$ git commit -m "Useful message"
```

## **Updating the local copy ("PULLING")**

```
$ git pull
```

## **Updating the remote ("PUSHING")**

```
$ git push
```

## **Current status of all files of repository**

```
$ git status
```

## **Show the history (commit log)**

```
$ git log
```

# Deleting, moving, cancelling, resetting

## Deleting a tracked file

```
$ git rm FILE
```

## Deleting a tracked file (but keeping an untracked copy)

```
$ git rm --cached FILE
```

## Moving a file (renaming)

```
$ git mv FILE TARGET
```

## Unstaging a file

```
$ git reset HEAD FILE
```

## Unmodify unstaged files

```
$ git checkout -- FILE1 FILE2
```

## Checkout a previous version

```
$ git checkout HASH
```

# Branching and merging

## Check the history of the branch (git log)

```
benedikt@icm-241-135:~/participants$ git log
```

```
commit 776e7c4f19493d88a85832dcef44ff2e569586bb
Author: Benedikt Daurer <benedikt.daurer@icm.uu.se>
Date: Mon Nov 21 15:59:00 2016 +0100
```

Fixed typo

```
commit 6acb9e49d9de91a8aa1536a659f3003f477e9c7d
Author: Benedikt Daurer <benedikt.daurer@icm.uu.se>
Date: Mon Nov 21 15:57:53 2016 +0100
```

Fixed link

```
commit fbb7ef51497d8aa77304280419c7cc4c67511626
Author: Benedikt Daurer <benedikt.daurer@icm.uu.se>
Date: Mon Nov 21 15:56:53 2016 +0100
```

Initial commit

## Check on the status of the branch (git status)

```
benedikt@icm-241-135:~/participants$ git status
On branch master
Your branch is up-to-date with 'origin/master'.
nothing to commit, working directory clean
```

```
$ git merge testing
```

# **Demonstration: Branching and merging**

## Exercise 2: Contribute to a collaborative project

- 1. Create a local copy (clone) of the following project:  
<https://github.com/uu-python/participants>
- 2. Create a new branch "yourname"
- 3. Edit a certain section of the file "cheatsheet.md" which was given to you by the teachers.
- 4. Commit your changes and give a meaningful log message
- 5. Push your local to remote branch with the same name
- 6. Switch to the master branch and merge the branch "yourname" into master
- 7. Update local master branch (pull)
- 8. Update remote master branch (push)

### **Adding new files to be committed**

```
$ git add README.md
```

### **Commit all new files**

```
$ git commit -m "Useful message"
```

### **Updating the local copy ("PULLING")**

```
$ git pull
```

### **Updating the remote ("PUSHING")**

```
$ git push
```

### **Create and checkout "testing"**

```
$ git checkout -b testing
```

### **Push a local branch to remote "testing"**

```
$ git push --set-upstream origin testing
```

### **Switch to branch "testing"**

```
$ git checkout testing
```

# Take home messages

- Version control using git helps you better organize your work (e.g. code, documentation, manuscripts, thesis, webpages, ...)
- git (together with github or bitbucket) enables collaborative coding/writing
- You always have a backup and you can easily go back to previous versions
